

FLEXIBILITY IS KEY

WEBCAM TRIPOD

Part of the TeamUp+ Series, the TRIPOD FLEX was designed to compliment our 'TeamuUp' camera line. Offering three strong, flexible legs, each provides complete mobility for securing your camera in any position. The durable, rubberized feet and rotating legs can adapt to any surface while holding the weight of cameras up to 2.7lbs., providing you a variety of different options. You decide how to mount your camera; wrap it around a pole, hang it from a chair or place on top of a piece of furniture.

The TRIPOD FLEX will steady your camera for amazing shots in nearly any environment.

FEATURES

- The standard 1/4" screw mount attaches to our Digitalinx web cameras and other cameras from third parties.
- Each leg provides flexible joints which freely rotate 360 degrees to create any desired shape for leveling on the most uneven surfaces.
- A fully adjustable and stable tripod allows for endless placement.
- Each of the nine socket joints within each leg can be removed and/or added for customization.
