# SSF BULK FIBER SOLUTIONS

## Stronger, Safer and Faster than standard fiber optic cable!

- **10,000x's THE FLEX LIFE OF STANDARD FIBER!** Extremely high mechanical fatigue rating. This makes SSF Fiber 10,000x's less susceptible to breaking due to bending. SSF Fiber has a pull tension that is 2.5 – 4x's that of UTP!
- **NEARLY IMPOSSIBLE TO GENERATE GLASS SLIVERS DURING STANDARD USE!** SSF Fiber is completely safe to handle & will not present the inherent safety concerns that conventional glass fiber brings.
- **33% LABOR SAVINGS USING OUR FIELD TERMINABLE SC PLUGS.** The termination process for SSF Fiber is very simple; it does not require a trained/certified fiber technician.
- **THE PATENTED POLYMER COATING ON SSF FIBER.** Guarantees no contamination reaches the underlying glass. Moisture, dirt & even human skin oils are kept from the signal carrying core & cladding by the proprietary coating. This feature increases the lifetime of the fiber well above & beyond standard fiber constructions.
- **MICRO-DISTRIBUTION SSF FIBER IS THE ULTIMATE IN SMALL DIAMETER FIBER CABLE.** Have a small conduit? Pull many more fibers than standard construction tight buffer fiber solutions. Even the armored fiber measures in under ¼ inch in diameter for up to 12 fibers.
