THREE AT THE READY

Liberty AV stands strong with trio of new racks from Installer's Choice

COLORADO SPRINGS, CO, November 4, 2010—Three rack enclosure systems from Installer's Choice have joined the Liberty AV Solutions catalog. Designated as models PTN, BTN, and ETN, the trio offers strength, competitive pricing, a host of available options and accessories, quick delivery times, and a solid guarantee with each purchase.

With a static test load rating of 12,250 lbs., **PTN** racks have a capacity that is virtually unrivaled within the marketplace. Perfect for applications with high volumes of cabling thanks to wider main channels and an overall width of 24", every PTN rack features welded construction and fully adjustable mounting rails to provide optimal support and the flexibility to mount a wide range of AV components. PTN racks are available in 27.5" and 32.5" depths, and heights of 24RU, 37RU, 40RU, and 44RU. Options include top panels designed to promote better cooling, plus an extensive array of side panels, shelving, drawers, and other accessories.

BTN racks are 22" wide and offered in depths of 26.5", 31.5", 36", and 42". Height options are offered in 24RU, 37RU, 40RU, and 44RU dimensions. Capable of being easily joined together or used in a stand-alone fashion with or without side panels, every BTN rack includes two pairs of 10-32 tapped mounting rails that are fully adjustable and imprinted with individually numbered RUs. With all mounting and joining hardware included with each rack, two ground studs welded into the caster base further enhance versatility. Just like the PTN racks, all BTN racks have a static load rating of 12,250 lbs.

Supported by fully-welded construction, every **ETN** rack is 22" wide and available with a depth of either 20" or 25". Height options range from 18RU, 21RU, and 27RU to 35RU, 40RU, and 44RU. With vented side panels built into each frame supplied as standard equipment, each ETN rack includes two pair of adjustable 10-32 tapped mounting rails with individually marked RUs. Like the BTN racks, ground studs can be found in the caster base, and all mounting and joining hardware is included. A static load rating capacity of 12,250 lbs. is once again listed on the spec sheet of every ETN model.

In stock and now shipping, the PTN, BTN, and ETN racks from Installer's Choice are shipped with all options and accessories fully assembled and in place. Customers can pick their options and assemble their rack systems online using proprietary, easy-to-use Configurator software that places individual orders under a single part number.

About Liberty AV Solutions (formerly Liberty Wire & Cable)

Liberty AV Solutions is recognized as a leading contract manufacturer of AV integration products. They are also positioned to be at the leading edge in digital solutions. Liberty's headquarters is in Colorado Springs, Colorado. Liberty's distribution offices are located in Colorado, Arizona, North Carolina, Hawaii and Europe. Liberty remains focused on customer service and education while continuing to provide the broadest range of professional AV products available. Liberty AV Solutions is a subsidiary of Communications Supply Corporation, which is owned by WESCO International, Inc., a publicly-traded Fortune 500 holding company headquartered in Pittsburgh, Pennsylvania.
